

## **ABSTRACT**

The objective of this project is to develop an online Departmental Placement Website. The Departmental Placement Website is a web-based project for managing the placement details in a department of a college. This website provides the details of student placement records with a proper login. The project stores the information of current placements, records of passed out students placements in the database. The system stores all the personal information of the students like their personal details, Cumulative Grade Point Average(CGPA) marks and their technical skills .The project includes all the details of the students that can be viewed by all the users (read only) and provides the up-to date information of all the placement records in a particular.Placement Website for Department helps the colleges to overcome the difficulty in keeping placement records of thousands of students in effective way with timely utilization. The front-end of the project uses HTML5, JavaScript and PHP where PHP is an object-oriented programming and has connectivity with MYSQL at back-end.
